CCHS Climate Change and Mental Health Thematic Report + Call for Evidence

Rhiannon Cordiner and Emma Gillingham

Thematic Report Overview

Part I – Impacts and pathways

Part II – Mental health interventions in response to climate change

Part I – Impacts and Pathways

Questions we want to answer:

- 1. What are the routes and mediating pathways between climate change and mental health impacts and what evidence is there for these in the UK?**
- 2. Which populations are most at risk of the mental health impacts of climate change in the UK?**

How will we do this?

- 1. ‘Review of reviews’ – wide range of climate-related exposures and mental health outcomes (including ecoanxiety and responses to the ‘concept’ of climate change)**
- 2. In depth look at UK based studies**
- 3. Include relevant ‘grey literature’**
- 4. Assessment of the confidence in the evidence base**

Part II – Mental health interventions in response to climate change

Questions we want to answer:

1. What intervention/adaptation evidence is there from the UK and other countries relevant to the UK that has or could be adopted?

How will we do this?

1. Update to evidence review
2. Call for case studies

Call for Evidence

Open call for evidence

Mental health and climate change in the UK: call for evidence

From: [UK Health Security Agency](#)

Published 4 November 2024

[Mental health interventions in response to climate change or adverse weather events](#)

- Inviting submissions of case studies which demonstrate provision of mental health intervention in relation to climate change and extreme weather events at the group or population level.
- Closes at **11:59pm on 17 January 2025**
- Climate.change@ukhsa.gov.uk
